

WEEKLY MARKET PERSPECTIVES

July 27 – July 31, 2026

STIFEL

Wealth management insights from Stifel's CIO Office

WHAT TO KNOW:

WEEKLY SNAPSHOT – ASSET CLASSES & SECTORS:*

U.S. Equities Rose Last Week

The S&P 500 rose 1.1% in a crowded week featuring a Federal Reserve decision, inflation data, growth figures, and mega cap tech earnings. The week brought more clarity on data than policy.

A Divided Fed Held Rates Steady

The Federal Open Market Committee left the policy rate at 3.50%-3.75% for a second consecutive meeting, though the vote drew the most attention. Three committee members dissented in favor of a 25-basis-point increase, a signal, in our view, that rate increases remain in play. Chair Kevin Warsh declined to call the decision a pause, describing it as a period of “watchful thinking, not watchful waiting,” and offered no forward guidance, leaving markets to trade the data. Equities fell 1.5% before recovering, with the 10-year yield near 4.66%. The data that followed affirmed the Committee’s decision to pause: Headline personal consumption expenditures (PCE) inflation eased to 3.7% year over year from 4.1%, and the PCE core measure eased to 3.3%, though much of that relief came from gasoline as the pause in the Iran conflict pulled pump prices lower, with crude still up roughly 20% in July. Growth slowed too, with second quarter gross domestic product growth at an annualized 1.5% against 1.8% expected. With no forward guidance from the Chair, we believe the next two inflation reports are likely to determine the September decision.

Megacap Earnings Divided the Artificial Intelligence Trade

The question defining this earnings season, whether the artificial intelligence buildout is worth its cost, did not produce a single answer. Microsoft climbed 15.5% on Thursday, its largest daily advance since 2008, as cloud results showed spending converting into revenue. In the same session, Meta fell 8% after free cash flow dropped 91% year over year. The two companies drew opposite receptions, and later results from Apple, recently a \$5 trillion company, and Amazon beat estimates without settling the argument. Investors are no longer treating AI investment as uniformly good or bad but underwriting each company’s ability to earn a return on it. The enthusiasm carried abroad, with Korea’s KOSPI** jumping 18% as Samsung and SK Hynix each gained roughly 30%. Even so, the Nasdaq Composite closes July more than 4% lower, and the widening dispersion within the sector, more than its direction, is what we are watching. We believe this argues for diversification across the technology complex over concentrated exposure, and for staying anchored to long-term objectives while AI returns are disclosed unevenly.

DISCLOSURE

Past performance does not guarantee future results. Investing involves risk, including the possible loss of principal. Asset allocation and diversification do not ensure a profit or protection against loss.

Led by Stifel Chief Investment Officer Michael O’Keeffe, the Stifel CIO Office is comprised of several investment professionals. The team works collaboratively with other Stifel professionals to develop macroeconomic analysis, market analysis, strategic and tactical asset allocation guidance, applied behavioral finance, and specific investment solutions for advisors and clients.

Alternative Investments or Non-Traditional Assets – Alternative investments may include, but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, Hedge Funds, Venture Capital, Limited Partnerships, etc.

Real Estate – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance.

Commodities and Futures – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains.

Hedge Funds – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

Venture Capital – Venture capital investments involve substantial risks. The risks associated with investing in companies in the start-up or expansion stages of development are greater than those of companies in later stages, because the companies’ business concepts generally are unproven and the companies have little or no track record.

Limited Partnerships – Generally, limited partnership investments are suitable only for a narrow class of relatively sophisticated investors. Limited partnership investments may be speculative in nature and be subject to resale restrictions or illiquidity. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment.

Bonds – When investing in bonds, it is important to note that as interest rates rise, bond prices will fall. High-yield bonds have greater credit risk than higher quality bonds.

Duration – Duration is a measure of the sensitivity of the price – the value of principal – of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

Standard Deviation – Standard deviation is a measure of the dispersion of a set of data from its mean. It is calculated as the square root of variance by determining the variation between each data point relative to the mean. If the data points are further from the mean, there is higher deviation within the data set.

International and Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Short Positions – The investor should note that when a short position moves in an unfavorable way, the losses are theoretically unlimited. The broker will demand more collateral, and the manager might have to close out that short position at an inopportune time to limit any further losses.

Small Company Securities – Small company securities are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

Private Equity – Private equity funds are not appropriate for all investors. Investors should be aware that private equity funds may contain speculative investment practices that can lead to a loss of the entire investment. Private equity funds may invest in entities in which no secondary market exists and, as such, may be highly illiquid. The funds are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information.

Core Personal Consumption Expenditures (PCE) – The PCE Price Index excluding volatile food and energy prices, revealing underlying inflation trends.

Index returns include the reinvestment of dividends but do not include adjustments for brokerage, custodian, and advisory fees. Indices are unmanaged, do not reflect fees and expenses, and are not available for direct investment.

INDEX DESCRIPTIONS

Bloomberg U.S. 1000 Total Return Index – The Bloomberg U.S. 1000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

Bloomberg U.S. 2000 Value Total Return Index – The Bloomberg U.S. 2000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

Bloomberg Magnificent 7 Total Return Index – The Bloomberg Magnificent 7 Total Return Index is an equal-dollar weighted equity benchmark consisting of a fixed basket of 7 widely-traded companies classified in the United States and representing the Communications, Consumer Discretionary and Technology sectors as defined by Bloomberg Industry Classification System (BICS).

Bloomberg U.S. Treasury 1-5 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 1 and 5 years.

Bloomberg U.S. Treasury 5-7 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 5 and 7 years.

Bloomberg U.S. Treasury 7-10 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 7 and 10 years.

Bloomberg U.S. Treasury 20+ year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities over 20 years.

Bloomberg Germany Govt 7-10 year – this index includes fixed income securities issued by Germany guaranteed by German government, all with maturities between 7 and 10 years.

Bloomberg Spain Govt 7-10 year – this index includes fixed income securities issued by Spain guaranteed by Spanish government, all with maturities between 7 and 10 years.

Bloomberg Italy Govt 7-10 year – this index includes fixed income securities issued by Italy guaranteed by Italian government, all with maturities between 7 and 10 years.

Credit Suisse Japan Govt 7-10 year – this index includes fixed income securities issued by Japan guaranteed by Japanese government, all with maturities between 7 and 10 years.

Bloomberg U.S. Treasury Bills 1-3 Months Index includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value.

Bloomberg U.S. Corporate IG Index is an index considered representative of fixed-rate investment-grade taxable bond debt.

Bloomberg U.S. Aggregate Corporate Index is an index considered representative of fixed-rate investment-grade taxable bond debt.

Bloomberg U.S. Corporate High Yield is an index considered representative of fixed-rate, noninvestment-grade debt.

Bloomberg U.S. Government Bond Index is an index considered representative of fixed-rate, investment-grade US Government debt.

Bloomberg Global Aggregate provides a broad-based measure of the global investment-grade, fixed-rate debt market.

BofAML MOVE Return Index measures U.S. bond market volatility by tracking a basket of OTC options on U.S. interest rate swaps. The Index tracks implied normal yield volatility of a yield curve weighted basket of at-the-money one-month options on the 2-year, 5-year, 10-year, and 30-year constant maturity interest rate swaps.

DJIA – The Dow Jones Industrial Average (DJIA) is a price-weighted average of 30 significant stocks traded on the New York Stock Exchange (NYSE) and the NASDAQ. The DJIA was invented by Charles Dow back in 1896.

NASDAQ Composite Index – The NASDAQ Composite Index is a capitalization-weighted index that is comprised of all stocks listed on the National Association of Securities Dealers Automated Quotation System stock market, which includes both domestic and foreign companies.

S&P 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

S&P 500 Equal Weight Index is the equal-weight version of the widely regarded Standard & Poor's 500 Index, which is generally considered representative of the U.S. large capitalization market. The index has the same constituents as the capitalization-weighted S&P 500, but each company in the index is allocated a fixed weight of 0.20% at each quarterly rebalancing.

S&P GICS Index is a benchmark for investment in the commodity markets and as a measure of commodity performance over time. The index was originally developed by Goldman Sachs. In 2007, ownership transferred to Standard & Poor's, which currently owns and publishes it. Futures of the S&P GSCI use a multiple of 250. The S&P GSCI contains as many commodities as possible, with rules excluding certain commodities to maintain liquidity and investability in the underlying futures markets. The index currently comprises 24 commodities from all commodity sectors.

INDEX DESCRIPTIONS

S&P Consumer Discretionary Select Index includes all companies in the S&P 500 Index classified under the GICS® Consumer Discretionary sector.

S&P Information Technology Index includes all companies in the S&P 500 Index classified under the GICS® Information Technology sector.

S&P Financial Select Index includes all companies in the S&P 500 Index classified under the GICS® Financial sector.

S&P Utility Select Index includes all companies in the S&P 500 Index classified under the GICS® Utility sector.

S&P Real Estate Select Index includes all companies in the S&P 500 Index classified under the GICS® Real Estate sector.

S&P Health Care Select Index includes all companies in the S&P 500 Index classified under the GICS® Health Care sector.

S&P Communication Services Select Index includes all companies in the S&P 500 Index classified under the GICS® Communication Services sector.

S&P Materials Select Index includes all companies in the S&P 500 Index classified under the GICS® Materials sector.

S&P Industrial Select Index includes all companies in the S&P 500 Index classified under the GICS® Industrial sector.

S&P Construction Select Index includes all companies in the S&P 500 Index classified under the GICS® Construction sector.

S&P Energy Select Index includes all companies in the S&P 500 Index classified under the GICS® Energy sector

The S&P CoreLogic Case-Shiller 20-City Composite Home Price NSA Index is a value-weighted average that seeks to measure the value of residential real estate in 20 major U.S. metropolitan areas. The index is a composite of single-family home price indices for the nine U.S. Census divisions.

MSCI AC World Index captures large and mid cap representation across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries.

MSCI Asia ex-Japan captures large and mid cap representation across two of three Developed Markets (DM) countries (excluding Japan) and nine Emerging Markets (EM) countries in Asia. With 647 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI EAFE Index captures large and mid cap representation across Developed Markets countries around the world, excluding the U.S. and Canada. With 914 constituents, the index

covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI Europe Index captures large and mid cap representation across 15 Developed Markets (DM) countries in Europe.

MSCI Emerging Markets (EM) Index captures large and mid cap representation across 23 Emerging Markets (EM) countries. With 837 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI Japan is designed to measure the performance of the large and mid cap segments of the Japanese market. With 321 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

MSCI Canada is designed to measure the performance of the large and mid cap segments of the Canada market. With 91 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Canada.

MSCI China captures large and mid cap representation across China H shares, B shares, Red chips, P chips and foreign listings (e.g. ADRs). With 153 constituents, the index covers about 85% of this China equity universe.

MSCI World Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed markets.

MSCI Latin America captures large and mid cap representation across five Emerging Markets (EM) countries in Latin America. With 109 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

West Texas Intermediate (WTI), also known as Texas light sweet, is a grade of crude oil used as a benchmark in oil pricing. This grade is described as light because of its relatively low density, and sweet because of its low sulfur content. It is the underlying commodity of Chicago Mercantile Exchange's oil futures contracts.

VIX is a trademarked ticker symbol for the Chicago Board Options Exchange Market Volatility Index and shows the market's expectation of 30-day volatility. It is constructed using the implied volatilities of a wide range of S&P 500 index options. This volatility is meant to be forward looking, is calculated from both calls and puts, and is a widely used measure of market risk, often referred to as the "investor fear gauge."

KBW Nasdaq Bank Index is designed to track the performance of the leading banks and thrifts that are publicly-traded in the U.S. The index includes 24 banking stocks representing the large U.S. national money centers, regional banks, and thrift institutions.

The Philadelphia Semiconductor Index is a modified capitalization-weighted index comprised of companies that are involved in the design, distribution, manufacturing, and sale of semiconductors. The index was developed with a base value of 100 as of December 1, 1993. *Index methodology changed from Price-weighted as of December 21, 2009.
