

Allocation Insights

MACROECONOMIC OVERVIEW

- President Trump's second term has ushered in sweeping policy shifts, most notably the imposition of 10% tariffs on all trading partners and even higher (145%) tariffs on China. These measures have triggered heightened market volatility and cast uncertainty over the trajectory of economic growth.
- The U.S. economy contracted 0.3% in the first quarter, based on the initial estimate. Consumer spending, which accounts for approximately two-thirds of GDP, expanded by 1.8%. However, a sharp 41.3% surge in imports – driven by corporate stockpiling ahead of impending tariff measures – weighed on GDP. We still expect modestly positive economic growth this year.
- Policy uncertainty has dampened sentiment while driving up inflation expectations, prompting a cautious stance from the Federal Reserve. Although rate cuts are anticipated later this year, the timing and magnitude of such adjustments remain uncertain.
- Corporate earnings were robust in Q1, with growth for S&P 500 companies estimated at 13.5%. While some companies have withdrawn forward guidance or offered dual-scenario outlooks, analysts maintain expectations for a solid 9.2% earnings growth for the full year.

PORTFOLIO CONSTRUCTION IMPLICATIONS

- We continue to see the year defined by **Gravitational Shifts** – with a rebalancing of markets, the economy, and policy, now complicated by rising trade tensions.
- Our base case projects U.S. GDP growth of 1.5%-2.5% this year, though policy shifts present notable downside risks. However, potential trade agreements and business-friendly initiatives could help mitigate uncertainty.
- Keep a long-term vision: Market volatility can create opportunities, and long-term investors may find compelling opportunities, especially in areas aligned with durable long-term **themes**.
- Stay diversified: Investors should ensure they are properly diversified, both across and within asset classes, to mitigate risk and enhance long-term returns. This includes broad exposure to sectors, geographies, and investment styles.
- Dollar-cost average: Invest cash earmarked for a long-term strategy gradually, with the flexibility to add more during market weakness.

WEATHERING MARKET VOLATILITY

When stocks correct, dropping more than 10% from their recent peak, losses may feel like they'll never end. Some investors might even panic and make irrational investment decisions that may jeopardize long-term goals and objectives. Here are three tips to help you navigate market volatility:

1. It's happened before

Short-term fluctuations shouldn't distract you from your long-term goals. After all, market volatility is a natural part of investing. In the last century, we've dealt with high inflation, pandemics, wars, and other geopolitical crises. However, markets have a history of rebounding from their downturns and growing to new heights over the long term.

2. Time In, not timing, the market

Some of the worst days in the equity markets have been followed by some of the best. By the time you realize a rebound is underway, the best time to get back into the market may have already passed. That's why we believe staying invested is a better strategy than trying to time the markets.

3. Take advantage of dislocations

No one can reliably predict the best nor the worst performing asset class from year to year. Volatile markets may offer the opportunity to add exposure to certain asset classes at a more reasonable valuation. Your asset allocation – the selection of the appropriate mix of investments for your particular situation – is one of the most important decisions you can make.

INVESTMENT THEMES

The following table summarizes our thinking across various asset classes and regions.

 Underweight
  Neutral
  Overweight

EQUITY	ASSET CLASS	CHANGE	CURRENT			COMMENTS
						
	U.S. Equity vs. Non-U.S. Equity	=				We guide investors to diversify between U.S. and non-U.S. equity, maintaining a neutral allocation versus our SAA. U.S. equities benefit from strong economic growth and innovation, but starting valuations may pose a headwind if company earnings underwhelm. Outside the U.S., attractive valuations are offset by geopolitical tensions and sluggish economic growth, softening their appeal.
	U.S. Large Cap vs. U.S. Small Cap	=				Large cap companies offer stability and earnings resilience but face valuation pressures after strong performance in mega cap tech. Small caps are more vulnerable to higher-for-longer interest rates, which challenge companies reliant on financing or carrying significant debt. However, a favorable economic backdrop and an earnings recovery still present opportunities within small cap for skilled active investors.
	U.S. Large Value vs. U.S. Large Growth	=				We believe investors should be diversified across both value and growth styles. We expect returns to broaden out beyond the M7 and have a preference for quality companies and those that are expected to benefit from our long-term investment themes. Value offers attractive relative valuations and benefits from higher yields, while growth continues to gain support from innovations like AI.
	Non-U.S. Developed Markets vs. Emerging Markets	=				Both developed and emerging markets remain vulnerable to idiosyncratic risks and headwinds from geopolitical tensions, economic challenges, and an “America First” agenda from the incoming Trump administration. Despite ongoing stimulus, China continues to grapple with structural challenges stemming from its high debt levels and aging population, compounded by persistent issues in its real estate market.
	Europe vs. Japan	=				Japanese equities have given back some of their gains recently, but we believe there is still the potential for relative outperformance. Japan’s domestic reflation along with corporate governance reform are likely to enhance shareholder value in the medium-to-long term. In Europe, policy uncertainty in France and Germany, weaker Chinese growth, and the Russia-Ukraine war remain headwinds for the growth outlook.

INVESTMENT THEMES (CONTINUED)

The following table summarizes our thinking across various asset classes and regions.

ASSET CLASS		CHANGE	CURRENT			COMMENTS
FIXED INCOME	U.S. Investment Grade vs. U.S. High Yield	=				We recently moved to neutral between investment-grade and high-yield bonds. High-yield corporate spreads are tight, leaving little margin for error, but corporate fundamentals remain strong, and the rate-cutting cycle should mitigate some of the downside risks. In investment grade, we expect returns to be primarily driven by carry, offering steady income in a stable rate environment.
	Corporates Government/Agency MBS	=				We remain neutral within the fixed income super sectors but believe there is opportunity within the asset class for active management. Asset-backed and mortgage-backed securities are attractive with 30-year mortgage rates remaining elevated, tempering prepayment risks.
	Duration	=				We view duration as a diversifier in a multi-asset class portfolio given the macroeconomic uncertainty and volatility in yields, and so we remain neutral on duration as compared to the overall market. Investors holding cash should consider extending duration.
ALTERNATIVES	Private Assets	=				For investors interested in alternative investments and able to handle illiquidity, exposure to some combination of private equity, private debt, and/or private real estate can be considered as part of a diversified portfolio.
	Hedge Funds	=				For investors interested in alternative investments and able to handle less liquidity who have conviction about manager skill, exposure to hedge funds can be a helpful part of a diversified portfolio. This is especially true in volatile, low-return environments.

ASSET CLASS RISK

Bonds – Bonds are subject to market, interest rate, and credit risk. Prices on bonds and other interest rate-sensitive securities will decline as interest rates rise. Municipal bonds may be subject to state and alternative minimum taxes, and capital gains taxes may apply. High yield bonds have greater credit risk than higher quality bonds. Yields and market values will fluctuate, and if sold prior to maturity, bonds may be worth more or less than the original investment.

Equities – Portfolios that emphasize stocks may involve price fluctuations as stock market conditions change. Small and mid capitalization stocks are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

International/Global/Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Alternative Investments – Alternative investments involve a high degree of risk, often engage in leveraging and other speculative investment practices that may increase the risk of investment loss, can be highly illiquid, are not required to provide periodic pricing or valuation information to investors, may involve complex tax structures and delays in distributing tax information, are not subject to the same regulatory requirements as more traditional investments, and often charge high fees, which may erode performance. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment. Alternative investments may include, but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, and Hedge Funds. **Real Estate** – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance. **Commodities and Futures** – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains. **Hedge Funds** – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors,

and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

INDEX DESCRIPTIONS

The Bloomberg U.S. 3000 Total Return Index is a float market-cap-weighted benchmark of the 3,000 most highly capitalized U.S. companies.

The Standard & Poor’s 500 Index is a capitalization-weighted index that is generally considered representative of the U.S. large capitalization market.

The Standard & Poor’s/TSX Composite Index is the benchmark Canadian index, representing roughly 70% of the total market capitalization on the Toronto Stock Exchange with about 250 companies included in it.

The Bloomberg U.S. 1000 Total Return Index is a float market-cap-weighted benchmark of the 1,000 most highly capitalized U.S. companies.

The Bloomberg U.S. 1000 Growth Total Return Index provides exposure to companies with superior growth factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 1000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 2000 Total Return Index is a float market-cap-weighted benchmark of the lower 2,000 in capitalization of the Bloomberg U.S. 3000 Index.

The Bloomberg U.S. 2000 Growth Total Return Index is a float market-cap-weighted equity benchmark derived from membership of the Bloomberg U.S. 2000 Index.

The Bloomberg U.S. 2000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. Micro Cap Total Return Index is a float market-cap-weighted benchmark of those securities in the U.S. Aggregate Equity Index with a market capitalization ranking of lower than 2,500.

The MSCI World ex USA All Cap Index captures large, mid, small, and micro cap representation across 22 of 23 Developed Markets (DM) countries (excluding the United States). With 8,138 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in each country.

The MSCI EAFE Index (Europe, Australasia, and the Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada.

The MSCI Europe Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of the developed markets in Europe.

The MSCI Pacific Index captures large and mid cap representation across five Developed Markets (DM) countries in the Pacific region. With 470 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

The MSCI Japan Index is designed to measure the performance of the large and mid cap segments of the Japanese market. With 322 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

The MSCI EM (Emerging Markets) Europe, Middle East and Africa Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the emerging market countries of Europe, the Middle East, and Africa.

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries,

government-related, and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and nonagency). Provided the necessary inclusion rules are met, U.S. Aggregate-eligible securities also contribute to the multicurrency Global Aggregate Index and the U.S. Universal Index, which includes high yield and emerging markets debt.

The Bloomberg U.S. Government/Credit Bond Index is a broad-based flagship benchmark that measures the non-securitized component of the U.S. Aggregate Index. It includes investment-grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related, and corporate securities.

The Bloomberg U.S. Treasury Index measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury. Treasury bills are excluded by the maturity constraint, but are part of a separate Short Treasury Index. STRIPS are excluded from the index because their inclusion would result in double-counting. The U.S. Treasury Index is a component of the U.S. Aggregate, U.S. Universal, Global Aggregate, and Global Treasury Indices.

The Bloomberg U.S. Treasury U.S. TIPS index includes all publicly issued, U.S. Treasury inflation-protected securities that have at least one year remaining to maturity, are rated investment grade, and have \$250 million or more of outstanding face value.

The Bloomberg U.S. Municipal Index covers the U.S. dollar-denominated, long-term, tax-exempt bond market. The index has four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and prerefunded bonds.

The Bloomberg U.S. Credit Index measures the investment-grade, U.S. dollar-denominated, fixed-rate, taxable corporate and government-related bond markets. It is composed of the U.S. Corporate Index and a non-corporate component that includes foreign agencies, sovereigns, supranationals, and local authorities.

The Bloomberg U.S. Corporate High Yield Bond Index measures the U.S. dollar-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch, and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg Global Aggregate Bond Index is a flagship measure of global investment-grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate, and securitized fixed-rate bonds from both developed and emerging markets issuers.

The Bloomberg Emerging Markets Hard Currency Aggregate Index is a flagship hard currency Emerging Markets debt benchmark that includes U.S. dollar-denominated debt from sovereign, quasi-sovereign, and corporate EM issuers.

The Wilshire U.S. REIT Index is a float-adjusted market capitalization-weighted index that measures U.S. publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

The Wilshire ex U.S. Real Estate Investment Trust IndexSM (Wilshire ex U.S. REIT) measures global publicly traded real estate investment trusts, less all U.S. securities. The Wilshire ex U.S. REIT is a subset of the Wilshire ex U.S. Real Estate Securities IndexSM (Wilshire ex U.S. RESI).

The Wilshire Global REIT Index is a float-adjusted, market capitalization-weighted index that measures global publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

Bloomberg Commodity Index (BCOM) is calculated on an excess return basis and reflects commodity futures price movements. The index rebalances annually weighted two-thirds by trading volume and one-third by world production, and weight-caps are applied at the commodity, sector, and group level for diversification. Roll period typically occurs from the sixth to the tenth business day based on the roll schedule.

The S&P GSCI Crude Oil Index is a sub-index of the S&P GSCI Commodity Index. The production-weighted index reflects the returns that are potentially available through an unleveraged investment in the West Texas Intermediate (WTI) crude oil futures contract.

The Wilshire Liquid Alternative IndexSM measures the collective performance of the five Wilshire Liquid Alternative strategies that make up the Wilshire Liquid Alternative Universe. The Wilshire Liquid Alternative Index (WLIQA) is designed to provide a broad measure of the liquid alternative market by combining the performance of the Wilshire Liquid Alternative Equity Hedge IndexSM (WLIQAEH), Wilshire Liquid Alternative Global Macro IndexSM (WLIQAGM), Wilshire Liquid Alternative Relative Value IndexSM (WLIQARV), Wilshire Liquid Alternative Multi-Strategy IndexSM (WLIQAMS), and Wilshire Liquid Alternative Event Driven IndexSM (WLIQAED).

The NYSE FANG+ Index is an equal-dollar weighted index designed to track the performance of highly-traded growth stocks of technology and tech-enabled companies in the technology, media & communications and consumer discretionary sectors such as Facebook, Apple, Amazon, Netflix, and Alphabet's Google.

Indices are unmanaged, do not reflect fees or expenses, and you cannot invest directly in an index.
