

WHAT TO KNOW:

WEEKLY SNAPSHOT – ASSET CLASSES & SECTORS:*

U.S. Equities Fell Last Week

U.S. equities fell last week, with the S&P 500 falling 0.10%. While markets contended with geopolitical developments near Iran and heightened volatility in precious metals, equity performance was primarily driven by a notable rotation out of software and technology stocks and into value- and cyclical-oriented sectors. This shift toward broader market participation was evident in the S&P 500 Equal Weight Index, which outperformed the cap-weighted S&P 500 by almost 225 basis points.

Equity Fundamentals Solid Despite Software Selloff on Disruption Fears

As fourth-quarter earnings season progresses, a defining theme has been the sharp upward revision to capital expenditure plans across the Magnificent Seven**, underscoring a continued and aggressive commitment to artificial intelligence infrastructure. Alphabet (GOOGL) delivered a blockbuster 2026 CapEx outlook of \$175-\$185 billion, nearly double its 2025 spending, reinforcing expectations for a sustained wave of data center investment. Amazon (AMZN), Microsoft (MSFT), and Meta (META) likewise guided CapEx meaningfully above 2025 levels. That said, investor response has been increasingly selective, rewarding companies perceived to have clearer monetization pathways while penalizing others where returns appear more back-end loaded. While these results support longer-term AI investment themes, investor attention shifted toward the potential disruptive impact of AI on incumbent software business models following the release of a new legal AI tool from Anthropic's Claude platform. This reignited concerns around platform disintermediation, triggering a sharp selloff in software equities and spillover weakness in private credit names with concentrated exposure to the sector. The S&P 500 Software Industry Index (GICS Level 3) fell 7.8% on the week and is now down 19.8% year to date. So far, the decline is valuation driven as the fundamentals remain intact, with software earnings tracking a blended growth rate of 27.8% for Q4 and estimates calling for 16.5% growth in 2026.

DISCLOSURE

Past performance does not guarantee future results. Investing involves risk, including the possible loss of principal. Asset allocation and diversification do not ensure a profit or protection against loss.

Led by Stifel Chief Investment Officer Michael O’Keeffe, the Stifel CIO Office is comprised of several investment professionals. The team works collaboratively with other Stifel professionals to develop macroeconomic analysis, market analysis, strategic and tactical asset allocation guidance, applied behavioral finance, and specific investment solutions for advisors and clients.

Alternative Investments or Non-Traditional Assets – Alternative investments may include, but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, Hedge Funds, Venture Capital, Limited Partnerships, etc.

Real Estate – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance.

Commodities and Futures – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains.

Hedge Funds – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

Venture Capital – Venture capital investments involve substantial risks. The risks associated with investing in companies in the start-up or expansion stages of development are greater than those of companies in later stages, because the companies’ business concepts generally are unproven and the companies have little or no track record.

Limited Partnerships – Generally, limited partnership investments are suitable only for a narrow class of relatively sophisticated investors. Limited partnership investments may be speculative in nature and be subject to resale restrictions or illiquidity. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment.

Bonds – When investing in bonds, it is important to note that as interest rates rise, bond prices will fall. High-yield bonds have greater credit risk than higher quality bonds.

Duration – Duration is a measure of the sensitivity of the price -- the value of principal -- of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

Standard Deviation – Standard deviation is a measure of the dispersion of a set of data from its mean. It is calculated as the square root of variance by determining the variation between each data point relative to the mean. If the data points are further from the mean, there is higher deviation within the data set.

International and Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Short Positions – The investor should note that when a short position moves in an unfavorable way, the losses are theoretically unlimited. The broker will demand more collateral, and the manager might have to close out that short position at an inopportune time to limit any further losses.

Small Company Securities – Small company securities are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

Private Equity – Private equity funds are not appropriate for all investors. Investors should be aware that private equity funds may contain speculative investment practices that can lead to a loss of the entire investment. Private equity funds may invest in entities in which no secondary market exists and, as such, may be highly illiquid. The funds are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information.

INDEX DESCRIPTIONS

Bloomberg U.S. 1000 Total Return Index – The Bloomberg U.S. 1000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

Bloomberg U.S. 2000 Value Total Return Index – The Bloomberg U.S. 2000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

Bloomberg Magnificent 7 Total Return Index – The Bloomberg Magnificent 7 Total Return Index is an equal-dollar weighted equity benchmark consisting of a fixed basket of 7 widely-traded companies classified in the United States and representing the Communications, Consumer Discretionary and Technology sectors as defined by Bloomberg Industry Classification System (BICS).

Bloomberg U.S. Treasury 1-5 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 1 and 5 years.

Bloomberg U.S. Treasury 5-7 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 5 and 7 years.

Bloomberg U.S. Treasury 7-10 year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 7 and 10 years.

Bloomberg U.S. Treasury 20+ year – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities over 20 years.

Bloomberg Germany Govt 7-10 year – this index includes fixed income securities issued by Germany guaranteed by German government, all with maturities between 7 and 10 years.

Bloomberg Spain Govt 7-10 year – this index includes fixed income securities issued by Italy guaranteed by Spanish government, all with maturities between 7 and 10 years.

Bloomberg Italy Govt 7-10 year – this index includes fixed income securities issued by Spain guaranteed by Italian government, all with maturities between 7 and 10 years.

Credit Suisse Japan Govt 7-10 year – this index includes fixed income securities issued by Japan guaranteed by Japanese government, all with maturities between 7 and 10 years.

Bloomberg U.S. Treasury Bills 1-3 Months Index includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value.

Bloomberg U.S. Corporate IG Index is an index considered representative of fixed-rate investment-grade taxable bond debt.

Bloomberg U.S. Aggregate Corporate Index is an index considered representative of fixed-rate investment-grade taxable bond debt.

Bloomberg U.S. Corporate High Yield is an index considered representative of fixed-rate, noninvestment-grade debt.

Bloomberg U.S. Government Bond Index is an index considered representative of fixed-rate, investment-grade US Government debt.

Bloomberg Global Aggregate provides a broad-based measure of the global investment-grade, fixed-rate debt market.

BofAML MOVE Return Index measures U.S. bond market volatility by tracking a basket of OTC options on U.S. interest rate swaps. The Index tracks implied normal yield volatility of a yield curve weighted basket of at-the-money one-month options on the 2-year, 5-year, 10-year, and 30-year constant maturity interest rate swaps.

DJIA – The Dow Jones Industrial Average (DJIA) is a price-weighted average of 30 significant stocks traded on the New York Stock Exchange (NYSE) and the NASDAQ. The DJIA was invented by Charles Dow back in 1896.

NASDAQ Composite Index – The NASDAQ Composite Index is a capitalization-weighted index that is comprised of all stocks listed on the National Association of Securities Dealers Automated Quotation System stock market, which includes both domestic and foreign companies.

S&P 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

S&P 500 Equal Weight Index is the equal-weight version of the widely regarded Standard & Poor's 500 Index, which is generally considered representative of the U.S. large capitalization market. The index has the same constituents as the capitalization-weighted S&P 500, but each company in the index is allocated a fixed weight of 0.20% at each quarterly rebalancing.

S&P GICS Index is a benchmark for investment in the commodity markets and as a measure of commodity performance over time. The index was originally developed by Goldman Sachs. In 2007, ownership transferred to Standard & Poor's, which currently owns and publishes it. Futures of the S&P GSCI use a multiple of 250. The S&P GSCI contains as many commodities as possible, with rules excluding certain commodities to maintain liquidity and investability in the underlying futures markets. The index currently comprises 24 commodities from all commodity sectors.

INDEX DESCRIPTIONS

S&P Consumer Discretionary Select Index includes all companies in the S&P 500 Index classified under the GICS® Consumer Discretionary sector.

S&P Information Technology Index includes all companies in the S&P 500 Index classified under the GICS® Information Technology sector.

S&P Financial Select Index includes all companies in the S&P 500 Index classified under the GICS® Financial sector.

S&P Utility Select Index includes all companies in the S&P 500 Index classified under the GICS® Utility sector.

S&P Real Estate Select Index includes all companies in the S&P 500 Index classified under the GICS® Real Estate sector.

S&P Health Care Select Index includes all companies in the S&P 500 Index classified under the GICS® Health Care sector.

S&P Communication Services Select Index includes all companies in the S&P 500 Index classified under the GICS® Communication Services sector.

S&P Materials Select Index includes all companies in the S&P 500 Index classified under the GICS® Materials sector.

S&P Industrial Select Index includes all companies in the S&P 500 Index classified under the GICS® Industrial sector.

S&P Construction Select Index includes all companies in the S&P 500 Index classified under the GICS® Construction sector.

S&P Energy Select Index includes all companies in the S&P 500 Index classified under the GICS® Energy sector.

The S&P CoreLogic Case-Shiller 20-City Composite Home Price NSA Index is a value-weighted average that seeks to measure the value of residential real estate in 20 major U.S. metropolitan areas. The index is a composite of single-family home price indices for the nine U.S. Census divisions.

MSCI AC World Index captures large and mid cap representation across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries.

MSCI Asia ex-Japan captures large and mid cap representation across two of three Developed Markets (DM) countries (excluding Japan) and nine Emerging Markets (EM) countries in Asia. With 647 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI EAFE Index captures large and mid cap representation across Developed Markets countries around the world, excluding the U.S. and Canada. With 914 constituents, the

index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI Europe Index captures large and mid cap representation across 15 Developed Markets (DM) countries in Europe.

MSCI Emerging Markets (EM) Index captures large and mid cap representation across 23 Emerging Markets (EM) countries. With 837 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

MSCI Japan is designed to measure the performance of the large and mid cap segments of the Japanese market. With 321 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

MSCI Canada is designed to measure the performance of the large and mid cap segments of the Canada market. With 91 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Canada.

MSCI China captures large and mid cap representation across China H shares, B shares, Red chips, P chips and foreign listings (e.g. ADRs). With 153 constituents, the index covers about 85% of this China equity universe.

MSCI World Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed markets.

MSCI Latin America captures large and mid cap representation across five Emerging Markets (EM) countries in Latin America. With 109 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

Morgan Stanley Market – implied pace of hikes index (MSPOKE) is the number of Fed rate hikes in the 12 months following the first rate hike implied by the Eurodollar interest rate futures market.

VIX is a trademarked ticker symbol for the Chicago Board Options Exchange Market Volatility Index and shows the market's expectation of 30-day volatility. It is constructed using the implied volatilities of a wide range of S&P 500 index options. This volatility is meant to be forward looking, is calculated from both calls and puts, and is a widely used measure of market risk, often referred to as the "investor fear gauge."

KBW Nasdaq Bank Index is designed to track the performance of the leading banks and thrifts that are publicly-traded in the U.S. The index includes 24 banking stocks representing the large U.S. national money centers, regional banks, and thrift institutions.

Index returns include the reinvestment of dividends but do not include adjustments for brokerage, custodian, and advisory fees. Indices are unmanaged, do not reflect fees and expenses, and are not available for direct investment.
