

MARKET PERSPECTIVES

WHAT TO KNOW:

WEEKLY SNAPSHOT – ASSET CLASSES & SECTORS:*

Markets Rose Last Week

U.S. equity markets rose 2.47% last week, the best weekly performance thus far in 2023. The first estimate for fourth quarter U.S. GDP came in better than anticipated, while personal consumption expenditure (PCE) data showed inflation decelerated in December, likely boosting investor sentiment. Federal Reserve policymakers may view this as a mild sign of relief going into their next meeting on February 1. Traders of fed funds rate futures are pricing in a 99% probability of a 0.25% hike.

Economic Update

Early last week, the release of The Conference Board's Leading Economic Index December data and S&P Global's U.S. January PMIs signaled a possible recession in the near term. However, better-than-expected data readings later in the week signaled the opposite. The first estimate for fourth quarter 2022 GDP growth showed a 2.9% rise, coming in better than the 2.6% consensus estimate. PCE, the Federal Reserve's preferred inflation measure, decelerated in December, in line with expectations. Over the year, PCE prices rose 5.0% but are down from 5.5% in November. The labor market continued to show its strength, with initial jobless claims unexpectedly falling. Lastly, new home sales and durable goods orders surprised on the upside.

Earnings Update

29% of S&P 500 companies have reported earnings for the fourth quarter, with 69% of them beating analyst expectations, up from 67% the previous week. The blended earnings growth rate for the index is at -5.0%, down from -4.6% the previous week, with the financials sectors still being the largest contributor to the downward earnings revision. The energy sector is expected to be the largest positive contributor to earnings. Excluding energy, the blended earnings growth rate would decline to -9.0% from -5.0%. This week, 109 companies are expected to report earnings.

DISCLOSURE

Past performance does not guarantee future results. Investing involves risk, including the possible loss of principal. Asset allocation and diversification do not ensure a profit or protection against loss.

Led by Stifel Chief Investment Officer Michael O’Keeffe, the Stifel CIO Office is comprised of several investment professionals. The team works collaboratively with other Stifel professionals to develop macroeconomic analysis, market analysis, strategic and tactical asset allocation guidance, applied behavioral finance, and specific investment solutions for advisors and clients.

Alternative Investments or Non-Traditional Assets – Alternative investments may include, but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, Hedge Funds, Venture Capital, Limited Partnerships, etc.

Real Estate – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance.

Commodities and Futures – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains.

Hedge Funds – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors, and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

Venture Capital – Venture capital investments involve substantial risks. The risks associated with investing in companies in the start-up or expansion stages of development are greater than those of companies in later stages, because the companies’ business concepts generally are unproven and the companies have little or no track record.

Limited Partnerships – Generally, limited partnership investments are suitable only for a narrow class of relatively sophisticated investors. Limited partnership investments may be speculative in nature and be subject to resale restrictions or illiquidity. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment.

Bonds – When investing in bonds, it is important to note that as interest rates rise, bond prices will fall. High-yield bonds have greater credit risk than higher quality bonds.

Duration – Duration is a measure of the sensitivity of the price -- the value of principal -- of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

Standard Deviation – Standard deviation is a measure of the dispersion of a set of data from its mean. It is calculated as the square root of variance by determining the variation between each data point relative to the mean. If the data points are further from the mean, there is higher deviation within the data set.

International and Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Short Positions – The investor should note that when a short position moves in an unfavorable way, the losses are theoretically unlimited. The broker will demand more collateral and the manager might have to close out that short position at an inopportune time to limit any further losses.

Small Company Securities – Small company securities are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

Private Equity – Private equity funds are not appropriate for all investors. Investors should be aware that private equity funds may contain speculative investment practices that can lead to a loss of the entire investment. Private equity funds may invest in entities in which no secondary market exists and, as such, may be highly illiquid. The funds are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information.

INDEX DESCRIPTIONS

Alerian is the leading gauge of energy Master Limited Partnerships (MLPs). The capped, float-adjusted, capitalization-weighted index, whose constituents represent approximately 85% of total float-adjusted market capitalization.

Bloomberg U.S. Treasury 1-5 yr – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 1 and 5 years.

Bloomberg U.S. Treasury 5-7 yr – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 5 and 7 years.

Bloomberg U.S. Treasury 7-10 yr – this index includes fixed income securities issued by the U.S. Treasury guaranteed by the U.S. government, all with maturities between 7 and 10 years.
