

MONTHLY MARKET PERSPECTIVES

June 2026

U.S. ECONOMY

- The economy is estimated to have grown 1.6% in the first quarter, below the 2.0% initial estimate, but continues to be supported by artificial intelligence-related activity.
- Gasoline prices and shelter contributed to a strong April consumer price index reading (+0.6%), bringing annual headline inflation up 3.8% over the year.
- Payrolls rose by 115,000, a bit softer than March's 185,000, but still reflecting a resilient labor market, with unemployment holding at 4.3%.
- Consumer sentiment fell to a fresh record low (44.8) and one-year inflation expectations rose further (4.8%).

U.S. EQUITY MARKETS

- U.S. equities extended April's relief rally into May, with the S&P 500 logging one of its longest weekly winning streaks in years (nine consecutive weeks) and the Dow Jones Industrial Average reaching a new all-time high. Three reinforcing tailwinds drove the move: a strong Q1 earnings season, easing geopolitical tensions following progress in U.S.-Iran negotiations, and renewed AI enthusiasm. The PHLX Semiconductor Sector Index rallied 22% in May, and while the strength reinforces the durability of the AI investment cycle, the size and speed of the rally also make valuations and future earnings delivery important watch points for investors.
- Corporate earnings have been a key driver. First quarter earnings reporting is nearly complete, and the blended S&P 500 earnings growth has been revised up to 28.7% , a sharp jump from just 12.9% at the start of the year and the highest growth rate since 2021. Positive earnings surprises and revenue beats are tracking well above both five- and 10-year averages, and the breadth of upside is widening beyond mega-cap technology to industrials, financials, and select consumer names.

INTERNATIONAL MARKETS

- International equities largely kept pace with the U.S. in May. Developed markets advanced, led by European equities on Middle East de-escalation hopes, with Japan equities supported by AI-related capex demand.
- Emerging markets rose 9.7% in May on continued AI hardware demand benefiting South Korea and Taiwan, alongside improving risk appetite.

FIXED INCOME

- Treasury yields drifted higher across the curve in May. The two-year rose 13 basis points to 4.00% and the 10-year retested the mid-4% area at 4.44%, as resilient growth data, sticky energy-driven inflation, and uncertainty around the Federal Reserve leadership transition kept buyers cautious.
- Following the conclusion of Jerome Powell's term on May 15, Kevin Warsh has been confirmed as the next Chair of the Federal Reserve. While Powell will continue to serve on the Board of Governors, he has explicitly declined any secondary leadership role, ensuring a clear transition for the new Chair. Warsh is expected to usher in a significant regime shift, favoring a reduced Fed presence in the economy and a faster reduction of the central bank's bond holdings. Interest rate markets are also adjusting to economic data, with inflation running hot and the labor market continuing to hold up. Recent meeting minutes reveal a divided committee with little intention of lowering rates soon, leading investors to pull back expectations for relief this year. Current market pricing suggests the Fed's next move could be a rate hike, with futures implying a 40% chance of a hike in March 2027.
- Credit spreads narrowed alongside the equity rally. The Bloomberg U.S. Aggregate Index slightly rose 0.3% and the Bloomberg U.S. Corporate High Yield Index rose 0.5%.

CURRENCY/COMMODITIES

- Oil prices eased significantly in May (-16.9%) after April's whipsaw, with the West Texas Intermediate (WTI) drifting lower as U.S.-Iran negotiations progressed toward a framework that would extend the ceasefire and gradually reopen the Strait of Hormuz. WTI remains 78.3% higher for the year.
- Gold treaded lower as optimism over a potential U.S.-Iran deal, finishing May 1.68% lower ending the month at \$4,540.26 per ounce.
- The U.S. dollar slightly rose 0.9% as stronger-than-expected inflation data pushed interest rate expectations higher for longer, lifting Treasury yields and supporting demand for dollar-denominated assets.

DISCLOSURES

Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situation, or needs of individual investors. There is no guarantee that the figures or opinions forecasted in this report will be realized or achieved. Employees of Stifel, Nicolaus & Company, Incorporated or its affiliates may, at times, release written or oral commentary, technical analysis, or trading strategies that differ from the opinions expressed within.

Diversification and asset allocation do not ensure a profit or protect against loss. Volatility is measured by calculating the standard deviation of the annualized returns over a given period of time. Investing involves risk, including the possible loss of principal. Any data on past performance contained herein is no indication as to future performance. The value of any investment may fluctuate as a result of market changes. The information in this document is not intended to predict actual results, and no assurances are given with respect thereto. The products mentioned in this document may not be suitable for all types of investors.

Led by Stifel Chief Investment Officer Michael O’Keeffe, the Stifel CIO Office is comprised of several investment professionals. The team works collaboratively with other Stifel professionals to develop macroeconomic analysis, market analysis, strategic and dynamic asset allocation guidance, applied behavioral finance, and specific investment solutions for advisors and clients.

Asset Class Risks

Bonds – Bonds are subject to market, interest rate, and credit risk. Prices on bonds and other interest rate-sensitive securities will decline as interest rates rise. Municipal bonds may be subject to state and alternative minimum taxes, and capital gains taxes may apply. High yield bonds have greater credit risk than higher quality bonds. Yields and market values will fluctuate, and if sold prior to maturity, bonds may be worth more or less than the original investment.

Equities – Portfolios that emphasize stocks may involve price fluctuations as stock market conditions change. Small and mid-capitalization stocks are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

International/Global/Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Alternative Investments – Alternative investments involve a high degree of risk, often engage in leveraging and other speculative investment practices that may increase the risk of investment loss, can be highly illiquid, are not required to provide periodic pricing or valuation information to investors, may involve complex tax structures and delays in distributing tax information, are not subject to the same regulatory requirements as more traditional investments, and often charge high fees, which may erode performance. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment. Alternative investments may include but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, and Hedge Funds.

Real Estate – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance.

Commodities and Futures – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains.

Hedge Funds – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

Index Descriptions

The Bloomberg U.S. 3000 Total Return Index is a float market-cap-weighted benchmark of the 3,000 most highly capitalized U.S. companies.

The Standard & Poor’s 500 Index is a capitalization-weighted index that is generally considered representative of the U.S. large capitalization market.

The Standard & Poor’s/TSX Composite Index is the benchmark Canadian index, representing roughly 70% of the total market capitalization on the Toronto Stock Exchange with about 250 companies included in it.

The NASDAQ Composite Index is a capitalization-weighted index that is comprised of all stocks listed on the National Association of Securities Dealers Automated Quotation System stock market, which includes both domestic and foreign companies.

The Bloomberg U.S. 1000 Total Return Index is a float market-cap-weighted benchmark of the 1,000 most highly capitalized U.S. companies.

The Bloomberg U.S. 1000 Growth Total Return Index provides exposure to companies with superior growth factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 1000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 2000 Total Return Index is a float market-cap-weighted benchmark of the lower 2,000 in capitalization of the Bloomberg U.S. 3000 Index.

The Bloomberg U.S. 2000 Growth Total Return Index is a float market-cap-weighted equity benchmark derived from membership of the Bloomberg U.S. 2000 Index.

The Bloomberg U.S. 2000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. Micro Cap Total Return Index is a float market-cap-weighted benchmark of those securities in the U.S. Aggregate Equity Index with a market capitalization ranking of lower than 2,500.

The MSCI World ex USA All Cap Index captures large, mid, small, and micro cap representation across 22 of 23 Developed Markets (D.M.) countries (excluding the United States). With 8,138 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in each country.

The MSCI EAFE Index (Europe, Australasia, and the Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada.

The MSCI China Index captures large and mid cap representation across China A shares, H shares, B shares, Red chips, P chips, and foreign listings (e.g. ADRs).

The MSCI Europe Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of the developed markets in Europe.

The MSCI Pacific Index captures large and mid cap representation across five Developed Markets (D.M.) countries in the Pacific region. With 470 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

The MSCI Japan Index is designed to measure the performance of the large and mid cap segments of the Japanese market. With 322 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

The MSCI EM (Emerging Markets) Europe, Middle East and Africa Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the emerging market countries of Europe, the Middle East, and Africa.

The MSCI India Index is designed to measure the performance of the large and mid cap segments of the Indian market.

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related, and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and nonagency). Provided the necessary inclusion rules are met, U.S. Aggregate-eligible securities also contribute to the multicurrency Global Aggregate Index and the U.S. Universal Index, which includes high yield and emerging markets debt.

The Bloomberg U.S. Government/Credit Bond Index is a broad-based flagship benchmark that measures the non-securitized component of the U.S. Aggregate Index. It includes investment-grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related, and corporate securities.

The Bloomberg 1-3 Month U.S. Treasury Bill Index includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than three months and more than one month, are rated investment grade, and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed rate and non-convertible.

The Bloomberg U.S. Treasury Index measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury. Treasury bills are excluded by the maturity constraint but are part of a separate Short Treasury Index. STRIPS are excluded from the index because their inclusion would result in double-counting. The U.S. Treasury Index is a component of the U.S. Aggregate, U.S. Universal, Global Aggregate, and Global Treasury Indices.

The Bloomberg U.S. Treasury U.S. TIPS index includes all publicly issued, U.S. Treasury inflation-protected securities that have at least one year remaining to maturity, are rated investment grade, and have \$250 million or more of outstanding face value.

The Bloomberg U.S. Municipal Index covers the U.S. dollar-denominated, long-term, tax-exempt bond market. The index has four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and prerefunded bonds.

The Bloomberg U.S. Credit Index measures the investment-grade, U.S. dollar-denominated, fixed-rate, taxable corporate and government-related bond markets. It is composed of the U.S. Corporate Index and a non-corporate component that includes foreign agencies, sovereigns, supnationals, and local authorities.

The Bloomberg U.S. Corporate High Yield Bond Index measures the U.S. dollar-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch, and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg Global Aggregate Bond Index is a flagship measure of global investment-grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate, and securitized fixed-rate bonds from both developed and emerging markets issuers.

The Bloomberg Emerging Markets Hard Currency Aggregate Index is a flagship hard currency Emerging Markets debt benchmark that includes U.S. dollar-denominated debt from sovereign, quasi-sovereign, and corporate E.M. issuers.

The Bloomberg Magnificent 7 Total Return Index is an equal-dollar weighted equity benchmark consisting of a fixed basket of 7 widely traded companies classified in the United States and representing the Communications, Consumer Discretionary and Technology sectors as defined by Bloomberg Industry Classification System (BICS).

The Wilshire U.S. Real Estate Investment Trust Index (Wilshire U.S. REIT) is a float-adjusted market capitalization-weighted index that measures U.S. publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

The Wilshire ex U.S. Real Estate Investment Trust IndexSM (Wilshire ex U.S. REIT) measures global publicly traded real estate investment trusts, less all U.S. securities. The Wilshire ex U.S. REIT is a subset of the Wilshire ex U.S. Real Estate Securities IndexSM (Wilshire ex U.S. RESI).

The Wilshire Global REIT Index is a float-adjusted, market capitalization-weighted index that measures global publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

Bloomberg Commodity Index (BCOM) is calculated on an excess return basis and reflects commodity futures price movements. The index rebalances annually weighted two-thirds by trading volume and one-third by world production, and weight-caps are applied at the commodity, sector, and group level for diversification. Roll period typically occurs from the sixth to the tenth business day based on the roll schedule.

The S&P GSCI Crude Oil Index is a sub-index of the S&P GSCI Commodity Index. The production-weighted index reflects the returns that are potentially available through an unleveraged investment in the West Texas Intermediate (WTI) crude oil futures contract.

The S&P GSCI (formerly the Goldman Sachs Commodity Index) serves as a benchmark for investment in the commodity markets and as a measure of commodity performance over time. The index was originally developed by Goldman Sachs. In 2007, ownership transferred to Standard & Poor's, which currently owns and publishes it. Futures of the S&P GSCI use a multiple of 250. The S&P GSCI contains as many commodities as possible, with rules excluding certain commodities to maintain liquidity and investability in the underlying futures markets. The index currently comprises 24 commodities from all commodity sectors.

West Texas Intermediate (WTI), also known as Texas light sweet, is a grade of crude oil used as a benchmark in oil pricing. This grade is described as light because of its relatively low density, and sweet because of its low sulfur content. It is the underlying commodity of Chicago Mercantile Exchange's oil futures contracts.

The Wilshire Liquid Alternative IndexSM measures the collective performance of the five Wilshire Liquid Alternative strategies that make up the Wilshire Liquid Alternative Universe. The Wilshire Liquid Alternative Index (WLIQA) is designed to provide a broad measure of the liquid alternative market by combining the performance of the Wilshire Liquid Alternative Equity Hedge IndexSM (WLIQAEH), Wilshire Liquid Alternative Global Macro IndexSM (WLIQAGM), Wilshire Liquid Alternative Relative Value IndexSM (WLIQARV), Wilshire Liquid Alternative Multi-Strategy IndexSM (WLIQAMS), and Wilshire Liquid Alternative Event Driven IndexSM (WLIQAED).

The Wilshire U.S. Real Estate Securities IndexSM (Wilshire U.S. RESI) measures U.S. publicly traded real estate securities. Designed to offer a market-based index that is more reflective of real estate held by pension funds, the Wilshire U.S. RESI is comprised of publicly traded real estate equity securities and unencumbered by limitations of other appraisal-based indexes. It can serve as a proxy for direct real estate investing by excluding securities whose value is not always tied to the value of the underlying real estate. Exclusions include: mortgage REITs, net-lease REITs, real estate finance companies, mortgage brokers and bankers, commercial and residential real estate brokers, home builders, large landowners and sub-dividers of unimproved land, hybrid REITs, and timber REITs. The rationale for the exclusions is that factors other than real estate supply and demand, such as interest rates, can influence the market value of these companies.

The Philadelphia Semiconductor Index is a modified capitalization-weighted index comprised of companies that are involved in the design, distribution, manufacturing, and sale of semiconductors. The index was developed with a base value of 100 as of December 1, 1993. *Index methodology changed from Price-weighted as of December 21, 2009.

The STOXX Europe 600 Index is a free-float, market capitalization-weighted index consisting of 600 publicly traded stocks. The index represents large, mid, and small capitalization companies across 18 countries of the European region: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

VIX is a trademarked ticker symbol for the Chicago Board Options Exchange Market Volatility Index, a popular measure of the implied volatility of S&P 500 index options.

Indices are unmanaged, do not reflect fees or expenses, and you cannot invest directly in an index.

Past performance is no guarantee of future results. Index returns include the reinvestment of dividends but do not include adjustments for brokerage, custodian, and advisory fees.

Core Personal Consumption Expenditures (PCE) – The PCE Price Index excluding volatile food and energy prices, revealing underlying inflation trends.
