

MONTHLY MARKET PERSPECTIVES

September 2026

U.S. ECONOMY

- The economy is estimated to have grown 1.5% in the second quarter (second estimate), as stronger consumer spending was partly offset by higher imports.
- Inflation eased further. The consumer price index (CPI) rose 0.1% and 3.4% over the year, a four-month low, while core CPI eased to 2.5%.
- The labor market offered a mixed picture. Payrolls unexpectedly fell by 23,000, and prior months were revised lower. The unemployment rate eased to 4.1% from 4.2%, and wage growth slowed to 3.2%.
- Household spending showed signs of cooling, as retail sales fell 0.6%, the largest drop since May 2025, and consumer sentiment fell to 51.7 from 55.2.

U.S. EQUITY MARKETS

- The S&P 500 rose 2.7% in August, giving back ground in the middle of the month before rallying to end the month close to its August record. Early gains reflected a strong earnings season and softer inflation data that reinforced expectations that the Federal Reserve would leave rates unchanged. Semiconductors led the mid-month pullback as rising long-term Treasury yields and concerns about artificial intelligence-related spending weighed. Power-related and longer-duration exposures lagged as enthusiasm for AI-driven power demand cooled, while AI-linked semiconductors recovered most of their losses after Nvidia reported results.
- Second quarter earnings cleared a [very high bar](#). With reporting nearly complete, 86% of companies reported earnings above estimates; blended earnings growth reached 52.1% versus the 23.1% expected on June 30. Analysts raised third and fourth quarter estimates to 28.2% and 25.8% growth, respectively.

INTERNATIONAL MARKETS

- Non-U.S. developed markets advanced modestly. Japanese equities rose 3.4% but ended roughly 2% below their mid-month peak as pressure from global long-end yields and the yen weighed.
- Emerging markets were mixed in August, with South Korea rebounding sharply as AI-related stocks recovered from their summer selloff. China moved slightly lower on continued signs of economic weakness, despite renewed stimulus expectations.

FIXED INCOME

- The yield curve modestly flattened in August. The two-year Treasury yield rose to 4.34% and the 10-year to 4.75%, while the 30-year reached its highest level since 2007, as federal debt topped \$40 trillion. With little forward guidance under Fed Chair Kevin Warsh, part of the move, in our view, reflected a higher term premium to compensate for policy uncertainty.
- The Treasury Department announced it will at least double buybacks of 10- to 30-year Treasuries to \$4 billion per operation in September; long yields fell on the news, then resumed climbing.
- At Jackson Hole, Warsh put price stability first, citing personal consumption expenditures (PCE) price inflation of 3.7% and saying the Fed must be confident that underlying inflation is moving to its objective “clearly and at sufficient speed. Otherwise, we have work to do.” He described an economy that appears to have strengthened, said he would be “hard pressed” to describe broad financial conditions as restrictive, and cautioned that market measures of inflation expectations “tend to look strong and durable until they don’t.” He also defended his move away from forward guidance, warning that when markets lean on the Fed’s signals and the Fed leans on market prices in return, both risk a “hall-of-mirrors problem” that leaves policymakers blind to new developments. Traders lifted the odds of a September hike to roughly 55% from about one-third the prior day.
- Investment-grade was flat and high-yield spreads narrowed by 18 basis points. The Bloomberg U.S. Aggregate Index rose 0.4% and the Bloomberg U.S. Corporate High Yield Index rose 1.0%.

CURRENCY/COMMODITIES

- West Texas Intermediate (WTI) crude oil rose 1.1% to \$85.76 per barrel, after falling to roughly \$75 early in the month and then rallied once the ceasefire expired and transits through the Strait of Hormuz slowed sharply.
- Gold rose, ending the month at \$4,437.38 per ounce, 9.7% higher, as investors sought protection against rising long-end yields, escalation in the Middle East, and a softer dollar.
- The U.S. dollar fell 0.5% over the month against a basket of currencies.

DISCLOSURES

Opinions expressed are subject to change without notice and do not take into account the particular investment objectives, financial situation, or needs of individual investors. There is no guarantee that the figures or opinions forecasted in this report will be realized or achieved. Employees of Stifel, Nicolaus & Company, Incorporated or its affiliates may, at times, release written or oral commentary, technical analysis, or trading strategies that differ from the opinions expressed within.

Diversification and asset allocation do not ensure a profit or protect against loss. Volatility is measured by calculating the standard deviation of the annualized returns over a given period of time. Investing involves risk, including the possible loss of principal. Any data on past performance contained herein is no indication as to future performance. The value of any investment may fluctuate as a result of market changes. The information in this document is not intended to predict actual results, and no assurances are given with respect thereto. The products mentioned in this document may not be suitable for all types of investors.

Led by Stifel Chief Investment Officer Michael O'Keeffe, the Stifel CIO Office is comprised of several investment professionals. The team works collaboratively with other Stifel professionals to develop macroeconomic analysis, market analysis, strategic and dynamic asset allocation guidance, applied behavioral finance, and specific investment solutions for advisors and clients.

Asset Class Risks

Bonds – Bonds are subject to market, interest rate, and credit risk. Prices on bonds and other interest rate-sensitive securities will decline as interest rates rise. Municipal bonds may be subject to state and alternative minimum taxes, and capital gains taxes may apply. High yield bonds have greater credit risk than higher quality bonds. Yields and market values will fluctuate, and if sold prior to maturity, bonds may be worth more or less than the original investment.

Equities – Portfolios that emphasize stocks may involve price fluctuations as stock market conditions change. Small and mid-capitalization stocks are typically more volatile and carry additional risks, since smaller companies generally are not as well established as larger companies.

International/Global/Emerging Markets – There are special considerations associated with international investing, including the risk of currency fluctuations and political and economic events. Investing in emerging markets may involve greater risk and volatility than investing in more developed countries.

Alternative Investments – Alternative investments involve a high degree of risk, often engage in leveraging and other speculative investment practices that may increase the risk of investment loss, can be highly illiquid, are not required to provide periodic pricing or valuation information to investors, may involve complex tax structures and delays in distributing tax information, are not subject to the same regulatory requirements as more traditional investments, and often charge high fees, which may erode performance. An investment is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment. Alternative investments may include but are not limited to: Real Estate Investment Trusts (REITs), Commodities, Futures, and Hedge Funds.

Real Estate – When investing in real estate companies, property values can fall due to environmental, economic, or other reasons, and changes in interest rates can negatively impact the performance.

Commodities and Futures – The risk of loss in trading commodities and futures can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains.

Hedge Funds – Investors should be aware that hedge funds often engage in leverage, short-selling, arbitrage, hedging, derivatives, and other speculative investment practices that may increase investment loss. Hedge funds can be highly illiquid, are not required to provide periodic pricing or valuation information to investors and often charge high fees that can erode performance. Additionally, they may involve complex tax structures and delays in distributing tax information. While hedge funds may appear similar to mutual funds, they are not necessarily subject to the same regulatory requirements as mutual funds.

Index Descriptions

The Bloomberg U.S. 3000 Total Return Index is a float market-cap-weighted benchmark of the 3,000 most highly capitalized U.S. companies.

The Standard & Poor's 500 Index is a capitalization-weighted index that is generally considered representative of the U.S. large capitalization market.

The Standard & Poor's/TSX Composite Index is the benchmark Canadian index, representing roughly 70% of the total market capitalization on the Toronto Stock Exchange with about 250 companies included in it.

The NASDAQ Composite Index is a capitalization-weighted index that is comprised of all stocks listed on the National Association of Securities Dealers Automated Quotation System stock market, which includes both domestic and foreign companies.

The Bloomberg U.S. 1000 Total Return Index is a float market-cap-weighted benchmark of the 1,000 most highly capitalized U.S. companies.

The Bloomberg U.S. 1000 Growth Total Return Index provides exposure to companies with superior growth factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 1000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. 2000 Total Return Index is a float market-cap-weighted benchmark of the lower 2,000 in capitalization of the Bloomberg U.S. 3000 Index.

The Bloomberg U.S. 2000 Growth Total Return Index is a float market-cap-weighted equity benchmark derived from membership of the Bloomberg U.S. 2000 Index.

The Bloomberg U.S. 2000 Value Total Return Index provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Bloomberg U.S. Micro Cap Total Return Index is a float market-cap-weighted benchmark of those securities in the U.S. Aggregate Equity Index with a market capitalization ranking of lower than 2,500.

The MSCI World ex USA All Cap Index captures large, mid, small, and micro cap representation across 22 of 23 Developed Markets (D.M.) countries (excluding the United States). With 8,138 constituents, the index covers approximately 99% of the free float-adjusted market capitalization in each country.

The MSCI EAFE Index (Europe, Australasia, and the Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada.

The MSCI China Index captures large and mid cap representation across China A shares, H shares, B shares, Red chips, P chips, and foreign listings (e.g. ADRs).

The MSCI Europe Index is a free float-adjusted market capitalization-weighted index that is designed to measure the equity market performance of the developed markets in Europe.

The MSCI Pacific Index captures large and mid cap representation across five Developed Markets (D.M.) countries in the Pacific region. With 470 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

The MSCI Japan Index is designed to measure the performance of the large and mid cap segments of the Japanese market. With 322 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Japan.

The MSCI EM (Emerging Markets) Europe, Middle East and Africa Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the emerging market countries of Europe, the Middle East, and Africa.

The MSCI India Index is designed to measure the performance of the large and mid cap segments of the Indian market.

The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related, and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and nonagency). Provided the necessary inclusion rules are met, U.S. Aggregate-eligible securities also contribute to the multicurrency Global Aggregate Index and the U.S. Universal Index, which includes high yield and emerging markets debt.

The Bloomberg U.S. Government/Credit Bond Index is a broad-based flagship benchmark that measures the non-securitized component of the U.S. Aggregate Index. It includes investment-grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related, and corporate securities.

The Bloomberg 1-3 Month U.S. Treasury Bill Index includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than three months and more than one month, are rated investment grade, and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed rate and non-convertible.

The Bloomberg U.S. Treasury Index measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury. Treasury bills are excluded by the maturity constraint but are part of a separate Short Treasury Index. STRIPS are excluded from the index because their inclusion would result in double-counting. The U.S. Treasury Index is a component of the U.S. Aggregate, U.S. Universal, Global Aggregate, and Global Treasury Indices.

The Bloomberg U.S. Treasury U.S. TIPS index includes all publicly issued, U.S. Treasury inflation-protected securities that have at least one year remaining to maturity, are rated investment grade, and have \$250 million or more of outstanding face value.

The Bloomberg U.S. Municipal Index covers the U.S. dollar-denominated, long-term, tax-exempt bond market. The index has four main sectors: state and local general obligation bonds, revenue bonds, insured bonds, and prerefunded bonds.

The Bloomberg U.S. Credit Index measures the investment-grade, U.S. dollar-denominated, fixed-rate, taxable corporate and government-related bond markets. It is composed of the U.S. Corporate Index and a non-corporate component that includes foreign agencies, sovereigns, supranationals, and local authorities.

The Bloomberg U.S. Corporate High Yield Bond Index measures the U.S. dollar-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch, and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Barclays EM country definition, are excluded.

The Bloomberg Global Aggregate Bond Index is a flagship measure of global investment-grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate, and securitized fixed-rate bonds from both developed and emerging markets issuers.

The Bloomberg Emerging Markets Hard Currency Aggregate Index is a flagship hard currency Emerging Markets debt benchmark that includes U.S. dollar-denominated debt from sovereign, quasi-sovereign, and corporate E.M. issuers.

The Bloomberg Magnificent 7 Total Return Index is an equal-dollar weighted equity benchmark consisting of a fixed basket of 7 widely traded companies classified in the United States and representing the Communications, Consumer Discretionary and Technology sectors as defined by Bloomberg Industry Classification System (BICS).

The Wilshire U.S. Real Estate Investment Trust Index (Wilshire U.S. REIT) is a float-adjusted market capitalization-weighted index that measures U.S. publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

The Wilshire ex U.S. Real Estate Investment Trust IndexSM (Wilshire ex U.S. REIT) measures global publicly traded real estate investment trusts, less all U.S. securities. The Wilshire ex U.S. REIT is a subset of the Wilshire ex U.S. Real Estate Securities IndexSM (Wilshire ex U.S. RESI).

The Wilshire Global REIT Index is a float-adjusted, market capitalization-weighted index that measures global publicly traded real estate investment trusts (REITs), excluding mortgage REITs, net-lease REITs, real estate finance companies, home builders, large landowners and sub-dividers, hybrid REITs, and companies that have more than 25% of their assets in direct mortgage investments.

Bloomberg Commodity Index (BCOM) is calculated on an excess return basis and reflects commodity futures price movements. The index rebalances annually weighted two-thirds by trading volume and one-third by world production, and weight-caps are applied at the commodity, sector, and group level for diversification. Roll period typically occurs from the sixth to the tenth business day based on the roll schedule.

The S&P GSCI Crude Oil Index is a sub-index of the S&P GSCI Commodity Index. The production-weighted index reflects the returns that are potentially available through an unleveraged investment in the West Texas Intermediate (WTI) crude oil futures contract.

The S&P GSCI (formerly the Goldman Sachs Commodity Index) serves as a benchmark for investment in the commodity markets and as a measure of commodity performance over time. The index was originally developed by Goldman Sachs. In 2007, ownership transferred to Standard & Poor's, which currently owns and publishes it. Futures of the S&P GSCI use a multiple of 250. The S&P GSCI contains as many commodities as possible, with rules excluding certain commodities to maintain liquidity and investability in the underlying futures markets. The index currently comprises 24 commodities from all commodity sectors.

West Texas Intermediate (WTI), also known as Texas light sweet, is a grade of crude oil used as a benchmark in oil pricing. This grade is described as light because of its relatively low density, and sweet because of its low sulfur content. It is the underlying commodity of Chicago Mercantile Exchange's oil futures contracts.

The Wilshire Liquid Alternative IndexSM measures the collective performance of the five Wilshire Liquid Alternative strategies that make up the Wilshire Liquid Alternative Universe. The Wilshire Liquid Alternative Index (WLIQA) is designed to provide a broad measure of the liquid alternative market by combining the performance of the Wilshire Liquid Alternative Equity Hedge IndexSM (WLIQAEH), Wilshire Liquid Alternative Global Macro IndexSM (WLIQAGM), Wilshire Liquid Alternative Relative Value IndexSM (WLIQARV), Wilshire Liquid Alternative Multi-Strategy IndexSM (WLIQAMS), and Wilshire Liquid Alternative Event Driven IndexSM (WLIQAED).

The Wilshire U.S. Real Estate Securities IndexSM (Wilshire U.S. RESI) measures U.S. publicly traded real estate securities. Designed to offer a market-based index that is more reflective of real estate held by pension funds, the Wilshire U.S. RESI is comprised of publicly traded real estate equity securities and unencumbered by limitations of other appraisal-based indexes. It can serve as a proxy for direct real estate investing by excluding securities whose value is not always tied to the value of the underlying real estate. Exclusions include: mortgage REITs, net-lease REITs, real estate finance companies, mortgage brokers and bankers, commercial and residential real estate brokers, home builders, large landowners and sub-dividers of unimproved land, hybrid REITs, and timber REITs. The rationale for the exclusions is that factors other than real estate supply and demand, such as interest rates, can influence the market value of these companies.

The Philadelphia Semiconductor Index is a modified capitalization-weighted index comprised of companies that are involved in the design, distribution, manufacturing, and sale of semiconductors. The index was developed with a base value of 100 as of December 1, 1993. *Index methodology changed from Price-weighted as of December 21, 2009.

The STOXX Europe 600 Index is a free-float, market capitalization-weighted index consisting of 600 publicly traded stocks. The index represents large, mid, and small capitalization companies across 18 countries of the European region: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

VIX is a trademarked ticker symbol for the Chicago Board Options Exchange Market Volatility Index, a popular measure of the implied volatility of S&P 500 index options.

Indices are unmanaged, do not reflect fees or expenses, and you cannot invest directly in an index.

Past performance is no guarantee of future results. Index returns include the reinvestment of dividends but do not include adjustments for brokerage, custodian, and advisory fees.

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. The Core CPI Index is a measure of CPI excluding food and energy prices.

The Personal Consumption Expenditures (PCE) Price Index, released each month in the Personal Income and Outlays report, reflects changes in the prices of goods and services purchased by consumers in the United States. The Core PCE Price Index is a measure of the PCE excluding volatile food and energy prices, revealing underlying inflation trends.
